## MASTER OF ARTS

The international two year full-time accredited program Master of Landscape Architecture is a design-based professional program aimed at applicants with academic and professional achievements with the potential for professional leadership. The program benefits from its unique relationship with the Master programs in architecture, nature conservation and other related fields at the Anhalt University of Applied Sciences as well as with the world-famous “Bauhaus” – a revolutionary movement in architecture, art and design. Since its conception in 1998, the Master of Landscape Architecture program aims to provide an intellectual base of knowledge in the field of landscape architecture and enable students to evolve sustainable solutions to current landscape architectural challenges. The new curriculum conceived in 2014 develops this focus further to emphasize design and the European context with current and innovative landscape and urban design of landscape architecture forming highlights of the program.

### SKILLS ACQUIRED

International focus

- students from all over the world
- teaching staff with international experience
- European context case studies
- analysis of various planning cultures
- develop individual networks with Landscape Architecture students as well as alumni
- access to landscape architecture companies for internships and professional development

### MAJOR FIELDS OF STUDY

- Atelier (project work)
- Basics of Landscape Architecture
- Environment and sustainable development
- Computer sciences (graphic design and GIS)
- Planting design

### PROGRAM DURATION

4 semesters (120 Credits)

### START OF PROGRAM

winter semester

### CAREER PROSPECTS

Team work and leadership skills

- develop and train international team work skills
- interdisciplinary focussed projects
- develop management skills essential for managerial functions
- Landscape architecture careers in both the public and private sectors.
- Landscape architectural, planning, engineering and multidisciplinary consultancy firms at local, regional and international levels.
- Abundant opportunities for work in companies in related fields through conservation agencies, land development companies etc.
- Entrepreneurs can practice as freelance landscape architects or start up their own landscape architectural practices
